Skills

Kotlin   Java   Kotlin multiplatform   Android SDK   Dependency Injection (Hilt/Koin)   Persistence (Room/SQL/Proto)   Jetpack
Networking (Retrofit/Ktor)   Kotlin Coroutines/Flows   ReactJS   Typescript   NextJS   Git

Work experience

Senior Software Engineer
Vipps MobilePay

2021 - Present   Oslo, Norway • Vancouver, Canada

- Lead the development of an entirely new credit financial product for Android users, leading to increased company revenue.
- Transitioned the core payment flow UI from XML to Jetpack Compose. This directly decreased the user drop-off rate when paying, and increased user engagement.
- Abstracted and streamlined core payment services into standardized modules, leading to increased efficiency across multiple domain teams, allowing for quick integration with the payment flow.

Senior Android Engineer
FINN.no

2019 - 2021   Oslo, Norway

- Developed an open-source image gallery that increased the companies' developer presence in the community as well providing users with a new immersive image-experience.
- Lead the development of a notification system for Android users. The new outreach system drastically improved user engagement and directly increased the communication power with customers.

Lead Android Engineer
DTT

2017 - 2019   Amsterdam, The Netherlands

- Managed the development of high-quality and cost-effective native Android applications, successfully converting prospective customers into sales.
- Mentored a team of developers, driving collaboration, where I significantly increased productivity.
- Carried out high-level processes, such as, app releasing, dependency management and code optimization, leading to increased scalability and maintainability of projects.

Software Engineer
DTT

2016 - 2017   Amsterdam, The Netherlands

- Provided a full range of consultancy services, including; the development of new native mobile applications, adding features to existing code-bases and in-depth code analysis.
- Notably increased client satisfaction by routinely meeting deadlines and diligently taking a detailed approach to the tasks I undertook.

Junior Software Engineer
Bandvulc

2013 - 2016   Plymouth, United Kingdom

- Created an always-on service that allowed the app to track the whereabouts of drivers when on the road. This functionality greatly increased the logistical overview of the entire fleet, making it easier to understand the status of each driver, in real-time.

Education

Bachelor of Computer Science
University of Plymouth   2014 - 2017

Bachelor of Psychology
Staffordshire University   2011 - 2014
